5. Leslie, A. C. "How Many Azalea Cultivars Have Been Named?" *The Azalean*. Fall 2014. 36 (3): 55.
6. I had to look it up myself. A dichlamydeous plant is one whose flower has both a calyx and a corolla. Azaleas and maples are examples. A monochlamydeous flower is one in which the perianth does not consist of a separate calyx and corolla, and mistletoe and fig are examples. An achlamydeous flower, which is said to be "naked," has neither a calyx nor a corolla, and willows and poplars are examples.
7. For more information on gender endings see Voss, D. H., "*Rhododendron indicum* and *Indicus*, -a, -um: A Slippery Slope." *The Azalean*, Summer 2007. 29(2): 28-29. See also Voss, D. H. "How Personal Names Become Epithets." *Journal American Rhododendron Society*. Fall 2011. 65(4): 193-194.
